

# ENCAP INVESTMENTS L.P.

## IT Business Continuity Report

IT failover services from Houston to Microsoft Azure

April 2023

## Summary

The purpose of this document is to record the results of EnCap site failover testing. These tests help ensure that EnCap Investments' IT services will continue to be available in the event that the Houston office is closed down and all IT services need to be available through Microsoft Azure or vice versa. IT has configured Microsoft Azure to serve as a secondary location for IT services along with providing day-to-day services. Moving some of these services is automatic and others require manual intervention.

## Objectives

The principal objective of this exercise was to test, verify and document the tasks and steps required to move or failover all EnCap IT services to the Cloud. If an event in Houston causes the Houston IT services to become unavailable, then the same services should become available from Microsoft Azure.

## Testing Procedure

Testing for each IT service took place on April 19, 2023. Testing was completed by Kirby Richards, Sophia Frieze and Abdul Jiwani. After verification that cloud services were functioning correctly, IT services were moved back to their primary location in Houston.

## IT Services in Scope and Results

### *Authentication Services Failover*

**Type:** Automatic

**High-Level Process/Info:** Ensure users can logon to domain from Azure with no logon issues **Test**

**Process:** Logon through Azure VPN server & connect to their machines with no errors or logon issues

### *Authentication Services Results - Success*

- No issues logging into the Azure servers & services with the Houston site unavailable.

### *File Services*

**Failover Type:** Automatic

**High-Level Process/Info:** File services through DFS-R replication are always up to date on both FSHou03 and FSAZ01.

**Test Process:** Ensure all file services are still available on shared drives

### *File Services Results- Success*

- All file services drives were available and confirmed by Kirby, Sophia & Abdul

## **VPN**

**Failover Type:** Automatic

**High-Level Process/Info:** VPN is hosted on both Houston and Microsoft Azure. It is available at all times to all users

**Test Process:** Ensure VPN services available in Azure by connecting through Azure VPN

### **VPN - Success**

- VPN Services in Azure and Houston are independent of one another and always available to users

- Kirby, Sophia and Abdul could access the EnCap network through Azure VPN

## IT Services Out of Scope

The following services are considered out of scope and not critical

### *Houston Phone System*

Reason: Phone systems run independently in Houston.

### *Backups*

Reason: Are uploaded to the Barracuda cloud services and the data is hosted at both the Houston office and a copy is hosted in Barracuda cloud. Microsoft Azure servers are getting backed up at geo redundant locations and are also running in high availability.

### *Misc EnCap Applications*

Reason: Non-critical engineering application which include: SpotFire, DiTransform, Quickbooks, & Aries.

## Conclusion

The failover test was successful and the next test to be done in July 2023
