

Energy Transition

Investor Conference

October 2024

This Presentation (the “Presentation”) has been prepared by EnCap Investments L.P. (“EnCap”) and is being delivered on a confidential basis in connection with EnCap’s annual Investor Conference for informational purposes only to current investors in existing EnCap funds. The information contained in the Presentation is confidential and its treatment is governed by the terms of the operating agreements of the applicable EnCap fund. Any reproduction or distribution of the Presentation, in whole or in part, or the disclosure of any portion of its contents, without the prior written consent of EnCap, is strictly prohibited. By accepting delivery of the Presentation, each recipient agrees to the foregoing and acknowledges on behalf of itself and its affiliates the following restrictions, limitations and qualifications.

The distribution of the Presentation does not constitute an offer to sell or a solicitation of an offer to buy interests in any fund managed or sponsored by EnCap and shall not be deemed to be any such offer or solicitation. Any such offer or solicitation will be made only pursuant to a confidential private placement memorandum of such fund, which will describe the terms and conditions of an investment in such fund, certain risks related to an investment in such fund, and set forth such fund’s subscription documents.

Certain information contained herein has been obtained from published or unpublished sources prepared by other parties not affiliated with EnCap. Neither EnCap nor its affiliates have verified any finding in the information attributed to a third-party herein and recipients of the Presentation should make their own independent investigations and evaluations of any such information. Any projections, forecasts and estimates and illustrative case studies contained in the Presentation are necessarily speculative in nature and are based upon certain assumptions, and are provided for illustrative purposes only. It can be expected that some or all of such assumptions will not materialize or will vary significantly from actual results. Accordingly, any projections are only estimates and actual results will differ and may vary substantially from the projections or estimates shown. EnCap expressly disclaims any representations or warranties as to, the projections, forecasts, estimates and case studies contained in the Presentation.

Past performance is not indicative of future results. There can be no assurances that any EnCap fund will achieve its objectives or avoid losses. Market conditions and legal and contractual restrictions may limit the liquidity of investments. Accordingly, actual realized returns on investment may differ materially from the values indicated herein.

Unless otherwise noted, all references to internal rate of return represent gross internal rate of return (“IRR”), and references to return on investment represent gross return on investment (“ROI”), in each case as further described in the following paragraph. Gross performance information does not reflect management fees, carried interests and other fees and expenses borne by investors in a fund, which will reduce returns and in the aggregate are expected to be substantial.

Gross IRR is calculated on the basis of the actual timing of investment inflows and outflows, aggregated monthly, and the return is annualized, without giving effect to carried interest, management fees, and other expenses of the type that would be borne by a fund’s investors. Gross ROI is calculated as total realized proceeds and unrealized values (if applicable) without giving effect to management fees, carried interest, and other fees or expenses of the type that would be borne by a fund’s investors, divided by the total capital invested. Net IRRs and net ROIs are calculated after taking into account management fees, carried interest, and fund expenses and will be lower than the gross IRRs and gross ROIs, respectively.

Certain information contained in this Presentation includes forward-looking statements. Forward-looking statements, which involve assumptions and describe the future plans, strategies or expectations of the management of EnCap, are generally identifiable by use of the words “will”, “shall”, “may”, “should”, “expect”, “anticipate”, “estimate”, “believe”, “intend”, “plan” or “project” or the negative of these words or other variations on these words or comparable terminology. Actual results, performance, liquidity, financial condition, prospects and opportunities may differ materially from those expressed in, or implied by, these forward-looking statements as a result of various risks, uncertainties and other factors. Except as expressly required by the federal securities laws, there is no undertaking to update or revise any forward-looking statements, whether as a result of new information, future events, changed circumstances or any other reason.

The statements made in the Presentation are as of the date on the cover and EnCap does not undertake any obligation to update the information contained herein or the assumptions on which such information was based in light of later events, developments or circumstances. EnCap and its affiliates make no representations or warranties, express or implied, as to the accuracy or completeness of any information contained in the Presentation and expressly disclaim any responsibility or liability for any loss or damage suffered or incurred by the recipient or any other person or entity (whether direct, indirect, consequential, reasonably foreseeable or otherwise) however caused (including but not limited to negligence) in connection with the information contained herein or the authenticity, accuracy, or completeness of such information. The recipient hereby acknowledges EnCap’s disclaimer of liability and on behalf of itself and its affiliates expressly releases EnCap and its affiliates and representatives, from any liability, loss or damage.

EnCap reserves the right to request the return or destruction of the Presentation at any time, and each recipient thereof agrees to return or destroy these materials immediately upon such request.

2024 EnCap Energy Transition Investor Conference Agenda

Schedule	Activity / Presentation	Speaker / Moderator
9:15 - 9:30am	Welcome / Opening Remarks	Kellie Metcalf
9:30 - 10:10am	Market Overview and Investment Landscape	Jim Hughes
10:10 - 10:45am	Funds Overview (Fund I-II)	Shawn Cumberland
10:45 - 11:25am	Panel: Portfolio Spotlight – Linea Energy <i>Cassidy DeLine – Chief Executive Officer</i> <i>Jonathan Vasdekas – Head of Development</i> <i>Luke O’Dea – Vice President of Engineering, Project Execution, and EPC</i> <i>Roberto Spoerer – Head of Finance</i>	Tim Rebhorn
11:25 - 11:30am	Concluding Remarks	Jim Hughes

Welcome / Opening Remarks

Parliament Energy – ERCOT Houston Zone Solar Plant Under Construction

EnCap Energy Transition Evolution Since Last Investor Conference

Significant progress on Fund I realizations and Fund II capital deployment in the last 12 months

Fund I

- Three monetizations in last 12 months for ~\$166MM in total proceeds (\$106.5MM to Fund I)
 - Triple Oak:** \$62.3MM⁽¹⁾ from platform sale
 - Solar Proponent:** \$30.4MM⁽¹⁾ proceeds at close from sale of the Clear Fork Creek project
 - Broad Reach:** \$13.8MM⁽¹⁾ distribution from sale of the Mountain West portfolio
- Catalyze converted 100MW to commercial operations, reached NTP on 200MW, and raised \$550MM of financings

Fund II

- Final close of \$1,513MM
- Committed ~\$750MM and invested over \$120MM in the last 12 months
- Expect to invest \$500MM+ in portfolio companies through year-end 2025
- Parliament construction on budget and schedule
- Linea acquired six late-stage development projects and issued first NTP

Note: All dollar amounts shown in millions.

(1) Represents proceeds attributed to EETF.

(2) Excludes \$13MM Solar Proponent proceeds retained by the company at closing of Clear Fork Creek; includes (i) \$4.0MM earn-out payment from Triple Oak's prior sale of the Prairie Switch Wind project to Fengate, (ii) \$8.2MM distribution from Catalyze, and (iii) \$7.8MM in distributions from ETF Module Holdings.

(3) Pro forma for reduction in Arbor commitment.

(4) Includes fees and expenses.

Given strong market conditions and growing opportunity set, EnCap preparing to launch EETF III in the first half of 2025

- Growing power demand and supportive underwriting environment position EnCap to deploy substantial capital into renewables platforms
- EETF II is committed to teams that have line of sight to deploying material capital in the next 24 months
- EnCap continues to see additional opportunities that present highly attractive risk-adjusted returns to capitalize on current and emerging market fundamentals

Is expected to launch

EnCap Energy Transition Fund III

Funding investments that will further the transition to a lower carbon future

H1 2025

Fund III expected to be offered at substantially the same return targets and mandate as prior energy transition funds

Market Overview and Investment Landscape

Borden Ave. – Catalyze

U.S. macroeconomic backdrop highly favorable for capital investment

Decarbonization momentum continues, specifically in the U.S. power sector; other sectors lag

Material load growth for first time in over two decades, putting upward pressure on power prices

Realization of growth forecasts contingent on reform of queues and transmission

Greenfield development cycles and developers' liquidity constraints have made asset M&A attractive

Expanded equipment supply capacity & tax credit markets support conversion of projects to operations

Market short high-quality growth platforms → EnCap well-positioned to meet demand

U.S. Market Continues to Outperform Other Advanced Economies

- U.S. GDP has outpaced and is expected to continue to outpace other advanced economies
- U.S. inflation has subsided and is approaching the Federal Reserve's target rate of 2.0%, triggering a rate cut

U.S. Real GDP Growth Outpacing Other Economies

U.S. Inflation Declining Towards Fed's Target Rate

Public Market Indexes Demonstrate Investor Confidence in U.S. and Renewables Strength⁽²⁾

Year-Over-Year Growth (%)

Source(s): International Monetary Fund, Organization for Economic Cooperation and Development, Chatham Financial, FactSet.

(1) Other G7 economies include Canada, United Kingdom, France, Germany, Italy, and Japan.

(2) As of 9/30/2024.

(3) Includes Clearway Energy, Constellation Energy, NextEra Energy, NRG Energy, and Vistra Corporation.

Renewables Sector is Growth Engine for U.S. Economy

- Renewables sector has grown to over 5% of U.S. private investment, materially contributing to GDP growth
- Employment in renewables has outpaced broader market, growing ~3x faster than overall U.S. in 2023

Renewable Energy Growing Share of U.S. Investment

Renewables Share of Private Investment in the U.S.

Renewables Job Growth Outpacing Overall U.S.

Annual U.S. Job Growth

Overall U.S.

Renewables

2023 Key Employment Statistics

4.2%

renewable energy growth; ~3x faster than total jobs added in the U.S. during the same period

400,000

renewable energy jobs added since 2020, growing faster than the rest of the energy sector

11.4%

YoY job growth in the zero-emission vehicle sector, ~6x faster than growth in fossil-based vehicle sector

23,715

jobs added in wind and solar power sectors in 2023

Wind and Solar Continue to Dominate the Energy Transition

- Renewable power has attracted ~60% to 75% of U.S. energy transition investment
- Cost competitiveness and decarbonization impact of renewables have been the primary enabler of large-scale deployment

Annual Energy Transition Investment in the U.S.

Historical U.S. Renewable Power Capacity Build

Decarbonization in Other Sectors Remains Largely Untapped

- To date, progress on advancing decarbonization in sectors other than electricity generation and storage has been modest
- Lack of long-term commercial agreements and unpredictable revenue outlook limit activity to creditworthy strategics

Actual EV Adoption Trails Forecasts⁽¹⁾

Automakers backtracked electric vehicle (“EV”) sales targets due to lower demand, creating uncertainty for EV-related investments

Renewable Fuels Forecasts Revised Downward

Deteriorating market conditions have resulted in significantly lower renewable diesel capacity than forecasted in 2021

U.S. CCUS Development Remains Challenged

~54% of CCUS capacity has been canceled or postponed due to development challenges and permitting uncertainty

Few Announced Hydrogen Projects Reach FID

Only 11% of global hydrogen projects have reached final investment decision

Source(s): Environmental Protection Agency, BNEF, and The Hydrogen Council.

(1) Excludes EV-only automakers.

Well-Capitalized Strategics Experience Challenges in Renewable Fuels

- Deterioration in the U.S. and European renewable fuels markets, cost pressures, and Class VI well permitting uncertainty have resulted in a flurry of project cancellations and delays

Company	Project Updates
	• March 2023: Canceled development of sustainable aviation fuel plant in Singapore due to lack of regulatory support, recognized \$1Bn in impairments • July 2024: Paused construction of Europe's largest biofuels plant located in the Netherlands, citing weak market conditions – Recognized incremental \$1Bn in impairments associated with renewable fuels • September 2024: Terminated plans to develop low-carbon hydrogen due to lack of demand
	• March 2024: Shuttered two U.S. biodiesel plants in Iowa and Wisconsin, totaling 50MMgal/Yr of renewable fuels production, citing poor U.S. market conditions • July 2024: Idled 23MMgal/Yr advanced biofuel production facility in Germany due to poor European market conditions
	• June 2024: Terminated \$125MM equity investment and biofuels offtake agreement with Global Clean Energy Holdings due to project delays associated with the company's Bakersfield facility in California
	• June 2024: Scaled back plans for biofuels production at its Cherry Point and Lingen production facilities, shifting focus from stand-alone biofuel production to co-processing (e.g., biofuels used in combination with petroleum)
	• August 2024: Paused development of Europe's largest commercial-scale e-methanol facility, citing low demand and lack of ability to secure offtake agreement at a reasonable price – Recognized \$140MM of impairments associated with the cancellation of the project

Source(s): Company press releases.

CCUS Opportunities Largely Limited to Well-Capitalized Strategies

- Private equity investment in CCUS limited due to regulatory uncertainty and substantial reliance on government subsidies
- Strategies with long-term development horizons have invested heavily into CCUS to support decarbonization initiatives
- As the industry matures, EnCap expects investment opportunities that are complementary to our core skillsets, such as carbon management and infrastructure development

Equity Capital Raised to Fund CCUS Projects

Forecasted U.S. Carbon Capture Capacity

Source(s): BNEF and company press releases.

Notable CCUS Projects and Transactions

Oil and Gas

Secured 270,000 acres in the Gulf of Mexico, representing the largest offshore CO₂ sequestration development to date

Received UK government approval to build \$5.2 billion CCUS project in northeast England

Purchased 80% ownership in Aker Carbon Capture to develop and scale CO₂ capture technology portfolio

Acquired Talos Low Carbon Solutions, which owns the Bayou Bend project (one of largest CCUS developments globally)

Power and Industrial

Developing two CCUS facilities to sequester CO₂ at biomass-fired power plants in Denmark

Constructing \$2 billion facility that will produce clean hydrogen using proprietary autothermal reforming and CO₂ capture technologies; Dow Chemical to serve as offtaker

Invested \$36 million in Avnos, which is developing a direct air capture system to remove both CO₂ and water from the air

U.S. Electricity Consumption at an Inflection Point

- Plans for data center expansion, electrification, and re-industrialization are propelling U.S. into a new era of material load growth; however, scale and timing of growth remains uncertain
- Realization of load growth forecasts dependent on the grid's ability to reliably supply power to diverse end users while delivering resiliency, affordability, and emissions reductions

After Decades of Declining Load Growth, Paradigm Shift for Power Demand Underway

U.S. Load Growth (8-Year CAGR)

Key Load Growth Drivers		
Sector		CAGR
Data Centers	Digitalization, artificial intelligence	0.9%
Residential	Electric heating and cooling	0.6%
Transport	Adoption of electric vehicles	0.6%
Commercial	Building electrification	0.4%
Industrial	Manufacturing, O&G electrification	0.4%
Less: Energy Efficiency Gains		(0.5%)
Total 2022-2030 Load CAGR		2.4%

Rising Demand Putting Upward Pressure on Power Price Forecasts

- Increasing power price forecasts add significant motivation to get assets to operations
- Even if increase to forecast is only partially realized, impact to project economics is material

Expected Load Growth Resulting in Significant Revisions to Around-the-Clock Power Price Forecasts

ERCOT North Zone (Texas)

SERC (North Carolina)

Source(s): Wood Mackenzie.

Note: Pricing is energy-only. Does not include RECs, capacity payments, or any other market specific additional revenue streams.

Industry Bottlenecks May Impede Realization of Load Growth Forecasts

- Combination of (i) scale and rate of power demand growth and (ii) industry constraints creating dilemma
- Interconnection and transmission bottlenecks are risks to incentivizing and interconnecting new generation to serve load
- Concerns for reliability and affordability will limit ultimate geographic distribution and shape of demand growth

Interconnection Extending Development Timelines

Renewables Average Queue Duration (Years)

Building new generation is increasingly difficult as interconnection bottlenecks continue to lengthen project schedules and increase costs

Grid Strained by Transmission Underinvestment

U.S. Transmission Miles Added Per Year

Transmission investment has deteriorated due to increasingly complex permitting and siting processes, regulatory uncertainty, and longer development timelines

Policy Measures May Improve Long-Term Development Landscape

- Regulatory reforms aim to shorten generation speed to market, reduce interconnection costs, and enhance grid reliability
- Impacts of recent interconnection and permitting reforms unlikely to manifest in project schedules for several years

Key Policies

- Stricter site control requirements
- Higher financial commitments
- Withdrawal penalties
- Mandated application processing timelines

Goals

- ✓ Reduce volume of speculative applications
- ✓ Alleviate study delays
- ✓ Accelerate time to interconnection

Key Policies

- Streamlined permitting process
- Proactive identification of transmission projects
- Standardized project evaluation criteria

Goals

- ✓ Expediate previously decades-long permitting timelines
- ✓ Improve grid reliability and alleviate congestion with new transmission lines

Illustrative Impact of Interconnection Reforms on MISO Queue

MISO Interconnection Queue (GW)

Transmission Reform Expected to Increase Investment

U.S. Transmission Investment (\$Bn)

Large Load Siting Complicated by Regulatory Pressures

- Grid operators and regulators grappling to balance load growth with reliability and affordability
- Large loads, such as data centers, are attempting to co-locate with baseload power generation assets to (i) ensure reliable, around-the-clock electricity supply and (ii) bypass load interconnection queues by connecting behind-the-meter
- When capacity resources are taken “off” the grid via co-location, local utilities must procure additional resources to fill the gap, resulting in higher costs to remaining customers

Regulators Challenging Co-location Amid Declining Reserve Margins and Increasing Electricity Costs

As renewables penetration increases, reserve margins across ISOs are forecasted to decline before impact of co-location

Anticipated Reserve Margin by ISO

Rising electricity bills forcing regulators to scrutinize impact of co-location on customer prices and utility capital plans

Change in Electricity Prices by Customer Class

Project M&A More Attractive Than Greenfield in Grid-Constrained Environment

- Longer development timelines and higher cost to carry greenfield projects put pressure on undercapitalized developers to sell mid to late-stage projects ahead of material capital investment
 - Quantity of projects in market resulting in attractive valuations
- Offtake premium for near-term projects, coupled with shorter timeline and less cost to NTP, make project acquisitions attractive compared to new greenfield

Evolution of Greenfield and M&A Project Returns

Indicative Project Life IRR

(1) Inclusive of interest associated with letters of credit.

M&A Market Saturated with Renewable Asset Divestitures

- Liquidity constraints and rationalization pushing developers to monetize pre-NTP projects
- Projects can be acquired at attractive valuations and provide timing advantage versus greenfield development
- Capitalizing on opportunity requires development expertise and access to capital to acquire best-positioned projects

Renewable Asset Divestitures

■ Solar
■ Wind
■ Storage
■ Solar in Market⁽¹⁾⁽²⁾
■ Wind in Market⁽¹⁾⁽²⁾
■ Storage in Market⁽¹⁾
■ Multi-Tech in Market⁽¹⁾⁽²⁾

Gigawatts

Number of projects in market is ~2.3x annual transacted volume for past five years, creating attractive project acquisition market

Source(s): Wood Mackenzie and S&P Global transaction databases, excluding platform transactions; Scotia Bank. Note: Data as of June 30, 2024.

(1) Excludes minority interest sale processes.

(2) Includes hybrid storage.

- Global demand for renewables driving manufacturers to invest heavily to increase capacity, lowering unit pricing
- Relief of supply constraints for major equipment improving renewables cost competitiveness, but long-lead items remain the largest impediment to project execution

Global Demand Increasing Manufacturing Capacity...

Non-U.S. Tariff Risked Solar Module Manufacturing Capacity (GW)⁽¹⁾

(1) Excludes module manufacturing capacity from countries that the U.S. currently is imposing tariffs on (China, Cambodia, Malaysia, Thailand, and Vietnam).

Long-Lead Equipment Remains Largest Bottleneck

Transformers: Weeks From Order to Delivery

Developers and operators with existing supplier relationships and ample available capital have a major advantage to secure long-lead equipment to maintain project timelines

Increased Tax Equity Capacity Easing Supply and Demand Imbalances

- Tax equity transferability market is maturing, both in terms of capacity and structure, adding predictability for developers
- Emergence of structured products resulting in similar economics to traditional tax equity

Increased Certainty in Tax Credit Monetization

Perceived Risks	Market Developments
Transfer market depth and liquidity	Tax credit buyer pool has rapidly developed in size and depth to absorb growing supply of credits
Transfer credit pricing	Market has stabilized between \$0.92 to \$0.94 for established technologies
Sub-optimal monetization of tax attributes	Direct credit transfer is less economic than traditional tax equity. Alternative (hybrid) financing structures have emerged to bridge gap in economics
Ability to lend against uncontracted tax credits	Lenders are widely providing financing against credits, beginning with Parliament Solar , the first project to secure financing against 'uncommitted' credits

Credit Transfer Market Developing to Meet Demand

Demand for Tax Capacity	Supply of Tax Capacity
- Solar, Wind, and Paired BESS Projects - New Credit-Eligible Projects (Standalone BESS, Hydrogen, Carbon Capture)	- Traditional Tax Equity - Actual Transfer and Hybrid Structures - Projected Transfer and Hybrid Structures

Debt Financing Market Remains Strong and Interest Rates Have Decreased

- Bank market continues to support the financing of high-quality renewables projects
- Treasury yield down 50 to 100 basis points, improving the economic competitiveness of contracted renewables projects

Renewable Financing Volume

\$ in Billions

■ Solar ■ Hybrid Solar ■ Wind ■ BESS ■ Multi-Tech ◆ Number of Debt Issuances

U.S. Treasury Yield Curve

— As of 09/30/2023 — As of 09/30/2024

Source(s): IJ Global, FactSet.

Market is Short High-Quality Platforms

- Platform M&A activity has more than halved over the last two years as many of the quality platforms transacted in 2021-2022
- Record levels of mega-fund dry powder, coupled with shortage of quality, derisked platforms, creates attractive environment for EnCap to monetize its platforms

Utility-Scale Clean Energy Platform M&A Activity

EnCap Transaction

Platform in Market (Majority Interest)

Market Backdrop Summary

Project Development

- Grid constraints extending greenfield development timelines and reducing risk-adjusted returns
- Constructive supply chain environment as value begins to accrue to developers and consumers instead of equipment suppliers
- Market is short near-term generation to meet rising demand

Offtake and Financing

- Strong offtake pricing available, especially in the near term
- Tax credit marketplace evolution providing capacity and predictability
- Debt markets remain liquid and long-term pricing has eased

M&A Market Dynamics

- Undercapitalized developers are forced sellers of mid to late-stage assets when large payments required to maintain project schedules become due, resulting in a deep project acquisition market
- Lower cost of capital buyers have record levels of capital to deploy to high-quality platforms with proven capabilities

EnCap Strategy

Develop, construct, commercialize, and finance near-term projects

Demonstrate full-cycle development, commercialization, and operational capabilities

Sell derisked platforms to large pools of lower cost of capital buyers

EnCap Track Record

- ✓ Constructed ~2.7GW⁽¹⁾ and developed 10GW+ of mid to late-stage projects
- ✓ Closed ~\$3.4Bn of third-party capital, including project-level and corporate financing and structured renewables products
- ✓ Since last investor conference, advanced ~3GW capable of reaching NTP in next 24 months to capitalize on market dynamics
- ✓ Deep offtaker relationships to leverage premium pricing being paid to developers with track records of delivering projects to commercial operations
- ✓ Executed three material platform exits to financial and strategic buyers since inception, all in excess of fund target returns and resulting in ~\$1.4Bn in realized proceeds distributed

(1) Includes assets currently under construction.

Funds Overview

Parliament Energy – ERCOT Houston Zone Solar Plant Under Construction

EETF I: 102% invested and 103% committed; positioning Catalyze and SolarPro for monetization

EETF II fundraise complete; \$1.5 billion dollars of committed capital

EETF II: 24% invested and 92% committed; focusing on capital deployment

Market dynamics creating attractive opportunities for portfolio companies

Capturing Fund target returns while moving down the risk spectrum

Substantial commercialization and construction expected over the next 24 months

EnCap is creating derisked platforms that will be highly attractive to lower cost of capital buyers

EnCap Energy Transition Portfolio Achievements Over the Last 12 Months

832MW

✓ Assets in Operation / Construction

*Advanced **3GW** of late-stage projects able to reach NTP in the next 24 months*

\$770MM

✓ Equipment Procured

*Including **3.6GW** of long-lead equipment*

\$3.0Bn

✓ Commercial Structures / Offtakes Signed or Under Negotiation

\$1.0Bn

✓ Debt and Tax Equity Financings

Executed first-of-kind facilities, including Linea's hybrid letter of credit facility and development loan

140+

✓ New Investment Opportunities Evaluated Across Energy Transition Landscape

EETF Portfolio Companies Positioned for Evolving Market Dynamics

Market Theme	Company	Date	Investment Focus
Reemergence of U.S. Electric Load Growth		Nov-2022	Independent power producer developing projects in high electricity demand growth regions
		Mar-2023	Capitalizing on market dynamics of high value locations and limited constructable projects
		Dec-2020	Deliver late-stage development projects in regions with material demand growth
		Sep-2024	Facilitating data center growth by developing complementary renewables
Investing Around Constraints		Mar-2023	Transition thermal to renewables, BESS, or data centers to facilitate time and cost advantages
		Jul-2024	Enhance resiliency and reduce emissions of critical infrastructure assets
		Mar-2019	Supporting commercial and industrial customers' energy demand and resiliency
		Mar-2024	Capitalize on transferability in IRA to bridge tax equity availability shortfall

Denotes new investments in the last twelve months

EnCap Energy Transition Fund II – Fund Status as of 9/30/2024

(1) Pro forma for \$207MM reduction in Arbor commitment.

- Linea Energy has made significant progress readying projects for construction; including issuing its first NTP in Q3 2024
- Six project acquisitions in the last 12 months, several of which are expected to reach NTP in 2025

Investment Summary

Overview	Geographically diversified, multi-technology (solar, wind, BESS) developer and operator with a nearly 6GW pipeline of projects with secured site control and/or active interconnection applications
Investment Strategy	Create an IPP platform with diversified capabilities and a deep pipeline of projects to monetize to a lower cost of capital buyer
Recent Highlights	- Acquired six advanced development projects (~1.2GW) capable of reaching NTP by 2027 - Issued NTP on Pineview project, an 80MW_{ac} solar asset in SERC with an executed 15-year PPA - Closed \$145 million development loan; includes low-cost letter of credit facility
Near Term Projections	- Derisk, commercialize, and construct mid to late-stage projects; advance early-stage pipeline - Complete Pineview tax equity and debt financing - Issue NTP on 500MW+ of projects
Monetization Pathway	Platform exit of operating portfolio and development pipeline to strategic or financial buyer
Commitment / Investment⁽¹⁾	- Committed: \$299.6MM (\$297.7MM net) - Invested: \$43.3MM (\$43.1MM net) - Valuation, net to EETF II: \$43.1MM

Linea Advancing Portfolio Through Key Milestones...

Pipeline by Stage (MW_{ac})⁽²⁾

...and Continues to Add to Highly Diversified Pipeline

By Technology⁽²⁾

By Market⁽²⁾

(1) As of 09/30/2024. (2) Pipeline as of October 1, 2024. "Other" markets include PJM, ISONE, and SERC.

Linea Portfolio Enhanced by Tactical Asset Acquisitions

- Undercapitalized developers are divesting projects amid higher financial security requirements and longer timelines associated with ongoing interconnection queue reforms. Linea has capitalized on these market dynamics through M&A

Recent Acquisitions Positioned to Benefit from Regional Load Growth⁽¹⁾

10-Year Peak Demand Growth by ISO (MW)⁽²⁾

- Parliament will be the largest solar power plant in premium ERCOT Houston Zone
- Construction of project remains under budget and substantially on schedule for an early 2025 commercialization date

Investment Summary

Overview	• Infrastructure company that will initially develop, construct, and operate utility-scale solar assets
Asset Summary	• 640MW_{dc} solar asset located in ERCOT Houston Zone, characterized by advantaged basis, load growth, and strong price outlook • Potential to co-locate battery energy storage
LTM Highlights	• Closed \$687MM of project financing • In exclusivity for (i) a \$185MM preferred equity investment and (ii) monetization of tax credits to an investment grade counterparty • Completed 90% of construction to date, with over 65% of the project mechanically complete
Near Term Projections	• Achieve commercial operations in early 2025 • Execute sale of tax credits generated by project • Potential to acquire additional development assets
Monetization Pathway	• Exit to utility-scale owner/operator • Asset to generate significant cash flow distributions
Commitment / Investment⁽¹⁾	• Committed: \$214.3MM (\$150.0MM net) • Invested: \$173.0MM (\$121.1MM net) • Valuation, net to EETF II: \$140.8MM

Project Status (October 2024)

- Strategy to repurpose and redevelop brownfield sites with an interconnection pathway
- Potential for significant time and cost savings in interconnection process, amidst historic queue constraints

Investment Summary

Overview	• Redeveloper of retired or end-of-life thermal generation or industrial sites to either solar, battery energy storage, or data centers
Investment Strategy	• Accelerate project timelines or reduce build costs by utilizing ISO generator replacement programs, bypassing delayed and costly new interconnection processes
LTM Highlights	• Secured land and submitted interconnection request for 100MW battery energy storage system at the former Vermont Yankee nuclear power station in ISO-NE
Near Term Projections	• Negotiating lease option for battery energy storage system in CAISO at a legacy thermal site; targeting execution in Q4 2024 • Acquire at least two additional redevelopment-focused projects by H1 2025
Monetization Pathway	• Platform sale to strategic or infrastructure investor • Monetize redeveloped assets
Commitment / Investment ⁽¹⁾	• Committed: \$100.0MM (\$99.0MM net) • Invested: \$13.7MM gross (\$13.6MM net) • Valuation, net to EETF II: \$13.6MM

Project Completion Timeline (Months)⁽¹⁾

Interconnection Queue Constraints Continue to Persist

Queue continues to grow, exacerbating project delays and increasing value proposition of brownfield redevelopment

Installed Capacity Renewables in Queue Thermal in Queue Other in Queue

- Transferability, spurred by Inflation Reduction Act, created a >\$20 billion p.a. shortfall in available tax equity supply
- Strategy to provide structured investments, including tax equity alternatives, to bridge shortfall

Investment Summary

Overview	Bildmore is a provider of structured investments, including tax equity alternatives, that optimize benefits of tax credits available under the Inflation Reduction Act, for project sponsors
Investment Strategy	Targeting asset classes that were not historically eligible for tax credits (e.g., battery energy storage)
LTM Highlights	- Onboarded key hires across management and investment analysis functions - Closed first deal in the form of a collateralized development loan in Q3 2024
Near Term Projections	Target to close on an additional deal in the form of tax credit optimization investment in a battery energy storage system in Q4 2024
Monetization Pathway	Sale of portfolio or full platform to lower cost-of-capital buyer
Commitment / Investment⁽¹⁾	- Committed: \$200.0MM (100% from EETF II) - Invested: \$34.5MM - Valuation, net to EETF II: \$34.5MM

Bildmore structure more accretive than simple transfer

- Aither is a manufacturer and operator of microgrid systems for cell towers and related telecom infrastructure
- Microgrids enhance resiliency of critical infrastructure assets while delivering emissions reductions, operational cost savings

Investment Summary

Overview	• Aither's lithium-ion battery energy storage solutions provide cost-competitive backup power with longer durations and fewer emissions than existing backup (diesel, lead acid batteries) • Led by management team of telecom industry veterans with long-standing cell carrier relationships
Investment Strategy	• Build an integrated energy management and resiliency platform initially focused on supplying and financing backup power solutions to the telecom sector
Recent Highlights	• Advanced commercial discussions with a top U.S. cell carrier with 50+ units sold to date • Made 12 key hires across the business development, finance, and engineering/operations teams
Near Term Projections	• Complete build-out of new assembly facility • Receive final product certifications
Monetization Pathway	• Platform sale to strategic or financial buyer
Commitment / Investment⁽¹⁾	• Committed: \$250.0MM (\$247.5MM net) • Invested: \$9.6MM (\$9.5MM net) • Valuation, net to EETF II: \$9.5MM

Weather-Related Outages Call for Backup Power...

Amid increasing frequency of weather-related grid outages, critical infrastructure assets such as cell towers must have backup power to ensure uninterrupted service

■ U.S. Extreme Weather Events (>\$1Bn Damages) ◆ U.S. Grid Outages

...But Existing Solutions are Short-Duration

Backup Power Duration (Hours) ■ Existing Offering ■ Aither Solutions

- Quantica is an energy infrastructure company focused on the development of renewable-powered, data-ready projects
- The company will meet growing demand for renewable power from data center owners and operators

Investment Summary

Overview	- Identify and commercialize powered land assets by arranging critical components to data center viability: renewable and reliable power, fiber, water - Management includes seasoned power, fiber, and data center industry executives
Investment Strategy	Satisfy data center industry's growing power demand and renewable energy targets through integrated siting and development of renewable-powered, data center-ready campuses
Recent Highlights	- Onboarded initial team of nine employees - Kicked off fiber permitting for initial site
Near Term Projections	- Advance development of first integrated project - Identify additional powered land opportunities in attractive markets across the U.S.
Monetization Pathway	- Multiple pathways to exit with liquid buyer markets - Optionality to monetize platform or development assets to low-cost of capital buyers
Commitment / Investment⁽¹⁾	- Committed: \$300.0MM (\$299.0MM net) - Invested: \$43.0MM (\$42.7MM net) - Valuation, net to EETF II: \$42.7MM

Data Center Power Demand Driven by Hyperscalers...

U.S. Data Center Demand (GW)

...Which are Top Renewable Energy Offtakers Today

Top U.S. Renewable Energy Buyers in 2024 (MW)

- Developed near construction-ready renewable fuels project to eliminate “harder-to-abate” emissions in the transportation sector
- Deteriorating market landscape, capital cost pressures, and Class VI permitting unpredictability resulted in development pause

Investment Summary

Overview	• Conversion of woody biomass to renewable fuels (gasoline, methanol, SAF, hydrogen)
Asset Summary	• 53-acre project site located in a heavily industrialized region of Beaumont, TX, adjacent to several critical plant utility connections • 280-acre wood processing and handling site • Raw materials and syngas cooler components
LTM Update	• Launched process to monetize platform in Q3 2023, contacted 100 potential buyers/investors and engaged in various bilateral processes • Entered into exclusivity with a strategic party which intended to serve as an offtake and JV counterparty • Lack of fixed price offtake coupled with volatile renewable fuels market pricing, and capital cost pressures deterred investors from acquiring platform
Monetization Pathway	• Project sale to developer/strategic or monetization of assets
Commitment / Investment⁽¹⁾	• Committed: \$213.6MM (\$87.4MM net)⁽²⁾ • Invested: \$141.3MM (\$87.4MM net)⁽²⁾ • Valuation, net to EETF I and II: \$43.7MM⁽²⁾

(1) Prisma Energy Solutions merged into Catalyze at cost of ~\$3.3MM (\$2.8MM net), effective 1/1/2021. In January 2024, Actis funded a \$62.9MM (net to EETF I) special distribution from Catalyze related to the February 2023 capital raise. \$8.2MM was realized and the remainder was used to assume \$54.7MM of HoldCo Notes with a target maturity date of January 11, 2025.

(2) Pro forma for \$80.6MM reduction in Arbor commitment.

Triple Oak Power: 100% Sale to Energy Capital Partners

EETF I monetized its 100% equity interest in Triple Oak Power (“Triple Oak”), bringing total realized equity proceeds to \$96.2MM; \$44.6MM invested prior to exit

Investment Summary

- Formed in August 2020 with a \$50MM commitment that was increased to \$100MM in September 2022 (\$85.8MM net to EETF I)
- Initially a contrarian strategy given the sunset of the production tax credit and focus on solar amongst the majority of U.S. renewables developers
 - IRA extended the production tax credit, increasing the demand for U.S. onshore wind projects
- Established an 8.3GW diversified renewable energy pipeline across WECC, SPP, MISO, and ERCOT
- Sold the 165MW Prairie Switch Wind project, a project that Triple Oak acquired with substantial development challenges, proving the platform’s capability to acquire, develop, and commercialize utility scale wind projects

Transaction Summary

- In Q1 2023, driven by surging inbound interest in the Triple Oak platform, EnCap initiated a marketing process to explore a potential sale
- A number of strategic and financial parties submitted first round bids, demonstrating the attractiveness of the platform
- Several parties submitted second round bids; Energy Capital Partners was selected based on the attractive economic terms and surety of closing
- Transaction was signed and closed on December 22, 2023, resulting in an upfront payment of \$86.8MM (\$62.3MM net to EETF I) and an earnout contingent upon the achievement of specific project development milestones by year-end 2026 (not contemplated in equity proceeds)

Asset Overview

Pipeline Summary

~8.3GW pipeline

~413k acres of land control

29 wind projects under development

\$ in millions	PSW Sale	Trans. Close	PSW COD Pmt.	Total
Timing	September 2022	December 2023	January 2024	-
Equity Proceeds	\$29.9	\$62.3	\$4.0	\$96.2
Investment				\$44.6
Proceeds in Excess of Cost				\$51.6

EnCap’s formation of Triple Oak was predicated on the fundamental need for high-quality onshore wind projects in the generation stack, despite the market focus on solar; this thesis resulted in a competitively advantaged pipeline as demand for U.S. wind surged, post IRA

Clear Fork Creek Transaction Overview

- In September 2024, Solar Proponent (“SolarPro”) closed the sale of Clear Fork Creek (“Clear Fork”), a ~780MW_{dc} / 600MW_{ac} late-stage ERCOT solar project, to Enbridge for ~\$61.9MM⁽¹⁾ of total equity proceeds
 - \$34.9MM⁽²⁾ total equity proceeds at close; \$21.4MM equity invested (\$18.7MM net to EETF I)
 - \$15.0MM milestone at NTP (exp. Q4 2025) and remaining \$12.0MM at COD (exp. Q2 2027)
- SolarPro acquired Clear Fork in Q3 2021 as a mid-stage development project for \$2.2MM and subsequently invested an incremental \$7.4MM, increasing the project size by ~150MW_{dc} and advancing the project towards NTP
- **Despite recent turbulence in the ERCOT solar M&A market, SolarPro remained patient and strategically positioned the asset to transact once stability reemerged**
 - Acquired 2,236 acres of land and secured site control
 - Purchased transformers to derisk project schedule and secure energy community qualification
 - Executed interconnection agreement with financial security posted
 - Completed technical design and finalized permitting
- **SolarPro’s advancement of development, coupled with its strategic maneuvers to secure interconnection, acquire land to secure site control, and procure necessary long-lead equipment, generated a premium valuation for the asset**

Development Margin Earned

- (1) Total equity proceeds include reimbursement for land (\$26.9MM) and transformer deposits (\$7.9MM). \$27.0MM of proceeds are derived from development fees if project achieves certain milestones.
- (2) Proceeds at close include reimbursement of development expenses, land, and transformer deposits.
- (3) Includes \$8.5MM development fee owed to prior developer.

Clear Fork Creek Asset Overview

Payment Timing

\$ in millions	Liquidity Event			
	Trans. Close	Notice to Proceed	Commercial Operations	Total
Event				
Timing	9/27/24	Q4 2025	Q2 2027	
Gross Proceeds	\$34.9	\$15.0	\$12.0	\$61.9
Net to EETF I	\$30.4	\$13.1	\$10.5	\$54.0
% of Total Proceeds	56.4%	24.2%	19.4%	100.0%

- Large portfolio of solar plus storage assets in ERCOT with 5.0GW_{dc} of utility-scale projects in attractive zones
- Sold 780MW_{dc} project to Enbridge in Q3 2024; four additional assets currently under exclusivity

Investment Summary

Overview	• Developer focused on building a portfolio of large-scale ERCOT solar projects
Asset Summary⁽¹⁾	• 5.0GW_{dc} (10 projects) utility-scale solar portfolio • 4.0GW_{dc} greenfield pipeline and 1.0GW_{dc} acquired projects
LTM Highlights	• Sold Clear Fork to Enbridge for \$61.9MM gross proceeds (\$34.9MM at close and \$27MM of potential NTP and COD milestone payments) • In final stages of securing attractively priced, 15-year PPAs for four North Zone assets (~2.1GW_{dc}) with investment grade offtaker
Near Term Projections	• Experiencing increase in unsolicited inbounds for project M&A and offtake opportunities • Position remaining portfolio for exit (through continued development and securing offtake agreements)
Monetization Pathway	• Monetize individual projects • Platform exit to utility-scale owner/operator
Commitment / Investment⁽²⁾	• Committed: \$145.0MM (\$126.5MM net) • Invested: \$133.0MM (\$116.0MM net) • Valuation, net to EETF I: \$133.8MM

Select Asset Highlights

North Zone Offtake Overview

Project	Tehuacana	Rowdy	Banita	Hollow
PPA Tenor	15 Years	15 Years	15 Years	15 Years
PPA % Contracted	100%	100%	100%	100%
NPV ⁽³⁾ (\$MM)	\$478	\$370	\$287	\$440

SolarPro in final stages of securing attractively priced, long-term PPAs for its North Zone assets with an investment grade offtaker

(1) Excludes sold projects. (2) As of 09/30/2024. (3) NPV of contracted revenue discounted at 8%.

- Vertically integrated developer, owner, and operator of distributed energy assets
- Successfully executing on the financing and construction of robust pipeline with ~370MW in operations or in-construction

Investment Summary

Overview	Independent power producer providing solar and battery energy storage to commercial and industrial consumers and community solar programs
Asset Summary	~370MW operating or in-construction >700MW of designed and actionable projects
LTM Highlights	- Commenced operations on ~100MW - Mobilized construction of ~150MW - Closed ~\$235MM of debt financing - Closed ~\$315MM of tax equity financing
Near Term Projections	~135MW operating by year-end 2024 ~275MW scheduled to mobilize in H1 2025 - Close \$450MM of construction debt financing, \$180MM of back leverage debt financing, and \$450MM of tax equity
Monetization Pathway	Platform exit to infra fund / strategic or IPO
Commitment / Investment⁽¹⁾	- Committed: \$554.8MM (\$265.3MM net) - Invested: \$538.7MM (\$265.3MM net) - Valuation, net to EETF I: \$336.4MM

(1) As of 09/30/2024.
